

BARTEC TOOL FEATURE SPOTLIGHT

FEATURE: Redi-Sensor

BENEFIT: Full coverage for this sensor

FIRST AVAILABLE: Software update 42 [January 2011]

WHAT TOOLS: Tech400Pro, Tech300Pro, Tech500, Tech400SD, Tech400+, Tech400, Tech300SD, Tech300+, Tech300

Using the Redi-Sensor with a Bartec tool is seamless and easy! No sensor programming is required. Simply select the desired Make Model and Year, and you are ready to go!

Bartec tools are regularly tested to ensure compatibility with REDI-Sensor, including the new patented valve design made to simplify aftermarket installation.

REDI-Sensor requires no programming. The sensor is pre-programmed at the factory, and is made on OEM equipment. You simply install REDI-Sensor and relearn the vehicle.

Remember, the vehicle relearn **MUST** be performed after you install a new sensor, whether it be the OEM part, REDI-Sensor, or another **aftermarket sensor**.

For the latest coverage of REDI-Sensor applications, visit www.dillvalves.com

BEST PRACTICE - ALWAYS TEST THE SENSOR BY SELECTING MAKE MODEL AND YEAR, AND THEN ACTIVATING. DO THIS BEFORE INSTALLATION!

Simple and Accurate
